Aktocyte

A recent collaboration between scientists from the **Department of Atomic Energy (DAE)** and **Bengaluru-based IDRS Labs** has led to the development of **Aktocyte tablets**, a promising new treatment for pelvic cancer.

[Ref: moneycontrol]

About Aktocyte Tablets:

- Aktocyte Tablets' primary aim is to **minimize the side effects of radiotherapy in cancer treatment**.
- Aktocyte tablets have shown remarkable results in **pelvic cancer patients, specifically those suffering from radiotherapy-induced Cystitis (blood in urine)**.
- The tablets have led to **an extraordinary recovery in patients, reducing the need for surgical removal of the urinary bladder**.

Features:

- Designed as an **adjuvant to cancer radiotherapy**, Aktocyte tablets also function as **regenerative nutraceuticals, immunomodulators, and antioxidants**.
- They mark a **significant advancement in the field of cancer care**.

Regulatory Approval:

- Aktocyte has received approval from the **Food Safety and Standards Authority of India (FSSAI)**.
